Two men took 5 hours on
each of 3 days a week to wind the
clock. Now (1992) a $2\frac{1}{2}$ h.p. motor
winds it in 40 min. 3 times a week.

A handful of coins in a tray on the 13-foot pendulum regulates the going; the removal of a halfpenny for 24 hours gives a gain of $\frac{1}{5}$ second. The daily error is normally less than this, and the greatest is $1\frac{1}{2}$ sec.

The North possessed a population of 26 million
the South 9 million

i.e. 6 million + 3 million slaves
North possessed nearly all the industrial
resources in the U.S. most of the
nation's financial resources and
most of its railroads

The tiny army of the North was a constabulary
force that barely provided enough soldiers
